New UNH Research Finds Angel Investors Seek Stability

DURHAM, N.H.—For the second year, a stabilization of the retreat from seed and start-up stage deals in the angel investor market in the first two quarters of 2018 indicates angels are seeking stability by investing in early stage ventures with more of a track record than a seed/start-up company, according to the Center for Venture Research at the University of New Hampshire.

“Angels continue to keep their investment allocations in the seed and start-up stage low, at 24 percent of investments, which is similar to 2017 (20 percent) and 2016 (27 percent),” said Jeffrey Sohl, director of the UNH Center for Venture Research. “Historically angels have been the major source of seed and start-up capital for entrepreneurs and while that stage remains close to a quarter of angel investments, angel seed/start-up investments have remained consistently below the pre-2008 peak of 55 percent. This steady decline in allocations signifies that there continues to be a need for seed and start-up capital for both new venture formation and job creation.”

The center’s analysis found the average angel deal valuation in the first half of 2018 was \$3.7 million, an increase of 14 percent from the 2017 average deal valuation of \$3.24 million.

Angel investments continue to contribute to job growth with 3.2 jobs per angel investment.
